

Having thus described and illustrated my new variety of tree, what I claim as new and desire to be secured by Plant Letters Patent is:

1. A new and distinct variety of pomegranate tree substantially as illustrated and described which bears fruit having a deep red rind coloration, arils of color from moderate red to deep red color and with the texture of the arils of the mature fruit easily chewable, being softer than other pomegranate varieties and which has a higher acid content than the fruit of the 'Granada' pomegranate tree at maturity and which ripens for harvesting and shipment approximately September 11 in the San Joaquin Valley of central California.
